Bob, I am in agreement with that. We will be working on it this morning. What follows is the email I sent START late Saturday night. I'll keep you informed of our progress today.

Subject: VOC Draft Report Figures 1, 2, and addition of figure 3 and possible 4

Guys, first thanks for all your responses and time today. Went back in and looked at the draft reports, here's my thoughts:

Figure 1 can stay as it is, however, if we can further delineate the boundaries between Westlake and Bridgeton would be nice (per Eric's question/comments). Do this for the rad & VOC reports.

Figure 2 does have the 5 stations and the NATT site, add the St. Louis airport met station as well. This is where we can put the monitoring table parameter (i.e. what we are monitoring for at each station) insert and show what we are monitoring and sampling for. Also add the wind rose table to this figure. Do one each for the rad & VOC report as well. VOC report only list VOC parameters – summa, radiellio's, AreaRae, etc. A similar insert table would work for the rad report – TLD's, eprms, gamma tracer, etc.

Add figure 3, which would have all the locations by each party (i.e. EPA, MDNR, Republic). I know it would like kind of busy, but it would show the three rings of monitoring and sampling around the site. Do one each for the rad & VOC report as well, but state that MDNR is not doing any radiological monitoring, only EPA and the RP (republic).

If necessary, add Figure 4 as a catch-all. Not sure what to put here, but we can discuss.

Also, when you are done, I will need these figures as a stand-alone document/map/Jpeg file or KMZ link so I can send them to our RA, Public affairs and Westlake staff. I have a prior engagement at 0900 Monday, so I'll be at the TetraTech office closer to 10 am on Monday, 1/19/15. Call me if you have questions. Thanks, again.

Bob, if you look in Appendix A, specifically at figures 1 & 2 in the draft report, they outline where our stations are, approx. distance from the site, wind rose direction and the NATTS station as well. However, I have START working on an additional map/figure which would inset/insert our monitoring parameters and equipment for rad & VOC's. I have a meeting scheduled with them on 1/19/15 and will get back with you that afternoon.
